

## Application Scientist

Chemical Computing Group (CCG) is a life science software company producing leading drug discovery technology for pharmaceutical and biotechnology companies.

Reporting to a Director of Scientific Support, this position requires computational drug discovery experience as well as superior interpersonal skills. We currently have an open position in Cambridge, UK.

In this role, you will be expected to:

1. Effectively interpret customers' scientific problems and queries and resolve them as required by phone, email or meetings.
2. Provide on-site customer support including formal presentations, demonstrations, training and discussions with a view to increasing usage of MOE applications.
3. Create customized software solutions using our in-house SVL scripting language.
4. Produce course materials, tutorials and other technical documents for pedagogical purposes.
5. Perform original research to produce scientific talks and posters and present them at conferences, workshops and customer visits.
6. Collaborate with CCG's research and development team for software testing and discussions on software development.
7. Provide recommendations to CCG sales and management teams to ensure that customers' expectations are met.
8. Be a well-respected and trustworthy resource for our clients.

Requirements include:

- Ph.D. or equivalent experience in computational drug discovery.
- Strong relationship building and technical writing skills.
- Independent drive and a strong work ethic.
- Outgoing and friendly personality.
- Experience with the MOE software a plus.
